The development process

Knowledge sharing:
Process improvement through knowledge sharing.
The way to a First time right design.

Manufacturability:
Choose the correct manufacturing process and use the correct design constraints of the chosen process.

Manufacturability:
Input experienced knowledge in the KSC campus.

Knowledge Sharing Centre

Manufacturability >>
Use design constrains of chosen manufacturing process

V-model
The V model is used to visualize and structure the relationship between all phases within the development process.
It is important to close each phase, because it must be a base for the next phase.

To bring the design process closer to the manufacturing process we try to setup the Knowledge Sharing Centre

From system to component
It begins with writing the system specifications.
From there, step by step lower so that a developer can start to turn this into a design.
